

## WHAT IS DATA FOR SOLUTIONS AND RESILIENCE?

Somalia faces one of the world's largest displacement crises, with **3.8 million internally displaced persons (IDPs)**. Many face future displacement amid risks of conflict and a worsening climate. IOM Somalia's **Displacement Tracking Matrix (DTM)** team leads the **Data for Solutions and Resilience** portfolio in coordination with the government in Somalia and partners. Activities are implemented by DTM jointly with the Danwadaag Consortium and the Saameynta Joint Programme - the two largest solutions consortia in Somalia. Evidence is generated to support solutions in urban centers, while enhancing the resilience of rural families to minimize displacement risks.

### KEY NUMBERS

**25 MILLION PEOPLE**

are expected to settle in urban centers by 2050, up from **7 million** in 2024

**80% OF DISPLACED PERSONS**

have fled from **rural to urban areas** due to drought, flooding and conflict

**1 OUT OF 3 PERSONS**

have **been displaced at least once before** arriving to their current location

**4 SOUTHERN CITIES**

of Mogadishu, Baidoa, Kismaayo and Doolow host **two-thirds** of displaced families

### FOCUS AND ACTIVITIES

#### PREVENTION AND RESILIENCE

- Displacement Risk Analysis

#### MOBILITY FORECASTING

- Long-Term Mobility Forecasting

#### SOLUTIONS TO DISPLACEMENT

- Government-Led Durable Solutions Progress (DSP) Survey
- The Federal Government of Somalia's Solutions Measurement: the DSP Index
- National Solutions Pathway Action Plan - Baseline Analysis
- Qualitative Research Report - Durable Solutions
- Conference Paper: Converting Data into Action
- Facility Mapping and Analysis

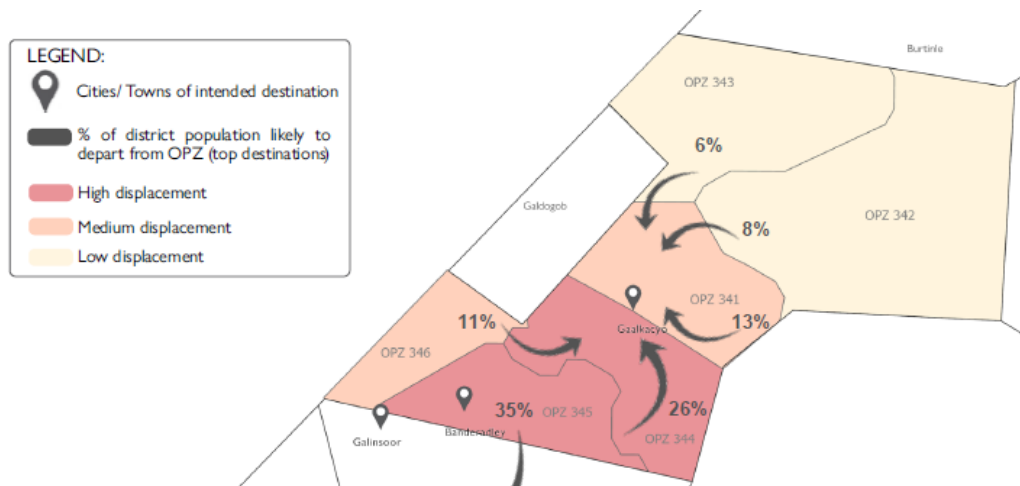

## PREVENTION AND RESILIENCE

### DISPLACEMENT RISK ANALYSIS

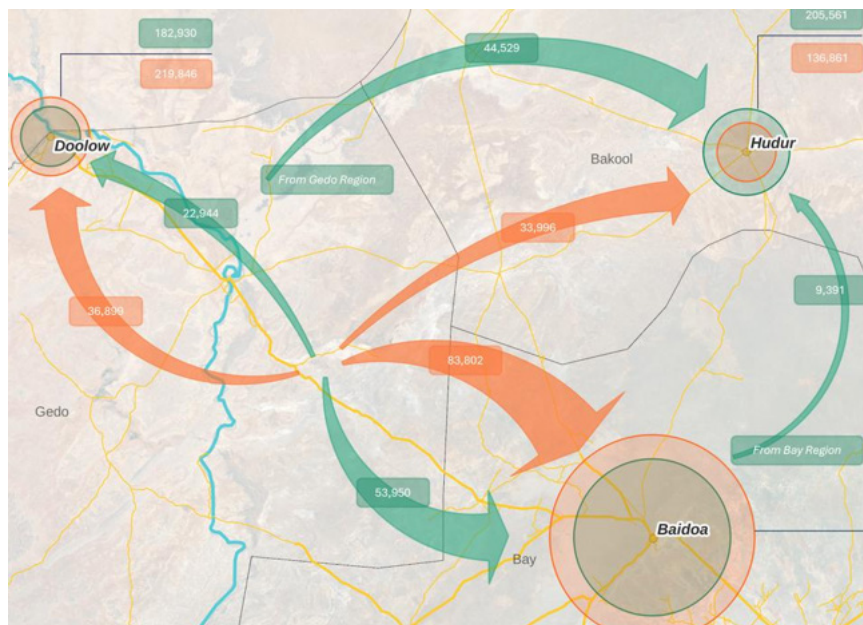

Since 2024, an analysis framework has been piloted to identify the risk of displacement in rural locations. This data assists in the prioritization of resilience interventions aimed at supporting at-risk groups a chance to avoid displacement and remain their location of displacement.

## MOBILITY FORECASTING

### LONG-TERM MOBILITY FORECASTING

In 2024, D4SR worked with research partner GIST to design and implement a Long-Term Mobility Forecasting activity. A Prophet predictive model was used to estimate the scale of migration into urban centers between 2023 and 2024. The model estimates the influence of investments in infrastructure and services in small “anchor” towns on long-term mobility patterns from rural locations in South-West State and Jubaland State.

# SOLUTIONS TO DISPLACEMENT

## GOVERNMENT-LED DURABLE SOLUTIONS PROGRESS (DSP) SURVEY

Under the leadership of the Federal Government of Somalia's National Center for Rural Development and Durable Solutions (NCRDS) and the Somali National Bureau of Statistics (SNBS), DTM has supported in the implementation of the Durable Solutions Progress (DSP) Survey since 2024. This is the first government-led survey focused on solutions in Somalia. The household survey provides representative data amongst IDPs and host communities to inform the government's [National Solutions Pathways Action Plan](#).

## DURABLE SOLUTIONS PROGRESS (DSP) INDEX: THE FEDERAL GOVERNMENT OF SOMALIA'S SOLUTIONS MEASUREMENT

Using data from the government's DSP Survey, IOM has supported in the development of the government's solutions measurement. Designed in line with the [International Recommendations of IDP Statistics \(IRIS\)](#) and the [Data for Solutions to Internal Displacement \(DSID\)](#) framework, the measurement presents progress across each of the Inter-Agency Standing Committee (IASC) Durable Solutions Criteria.

It includes two components:

- IASC criteria level indicators, identifying progress and gaps
- An overall measurement, displaying overall progress towards achieving a solution

## NATIONAL SOLUTIONS PATHWAYS ACTION PLAN - BASELINE ANALYSIS

In 2025, the DSR initiative supported the National Center for Rural Development and Durable Solutions (NCRDS) to develop a Baseline Analysis factsheet. It presents key findings from the DSP Survey and other sources to inform the prioritization of interventions under the government's [National Solutions Pathways Action Plan](#) in priority locations

## QUALITATIVE RESEARCH REPORT - DURABLE SOLUTIONS

In 2024, the DRS initiative worked with research partners GIST to implement a qualitative research study in urban centers focused on durable solutions. The key findings are presented in a report, highlighting key barriers faced by displacement-affected communities, while also assisting to understand their preferences and intentions for the future.

| Location   | Services, opportunities and assistance                                                                                                                                                             | Ease of Settling                                                                                        | Ease of Integration                                                               | Inflow Trends             |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------|---------------------------|
| Baidoa     | Security, services, employment, proximity to relatives, aid, progressive economic/life opportunities but expensive.                                                                                | Many opportunities for jobs. Extended family lives there; aid & services are available.                 | IDPs and host community felt there is good integration.                           | Significantly increasing. |
| Doolow     | Security, employment, proximity to relatives, aid; progressive economic/life opportunities but expensive,                                                                                          | Aid is available, extended family lives there, there are opportunities for work.                        | Lingering discrimination.                                                         | Significantly increasing. |
| Berdale    | Small, easier to integrate, offers access to natural resources, less congestion; cheaper but fewer job opportunities, fewer basic services and aid, and is perceived as more insecure and corrupt. | New arrivals must depend on host community for compassionate assistance. There are fewer jobs less aid. | Lingering discrimination.                                                         | Significantly increasing. |
| Hudur      | Small, easier to integrate, offers access to natural resources, less congestion; cheaper: but fewer job opportunities, basic services, and aid, and is perceived as more insecure and corrupt      | High dependence on support from host community; limited aid & few jobs.                                 | Mixed generally, integration is believed to be good. Students are not integrated. | Significantly increasing. |
| Baardheere | Inexpensive but fewer job opportunities, fewer basic services, and aid, and is perceived as more insecure and corrupt                                                                              | High dependence on support from host community; limited aid & few jobs.                                 | Good integration.                                                                 | Increasing.               |

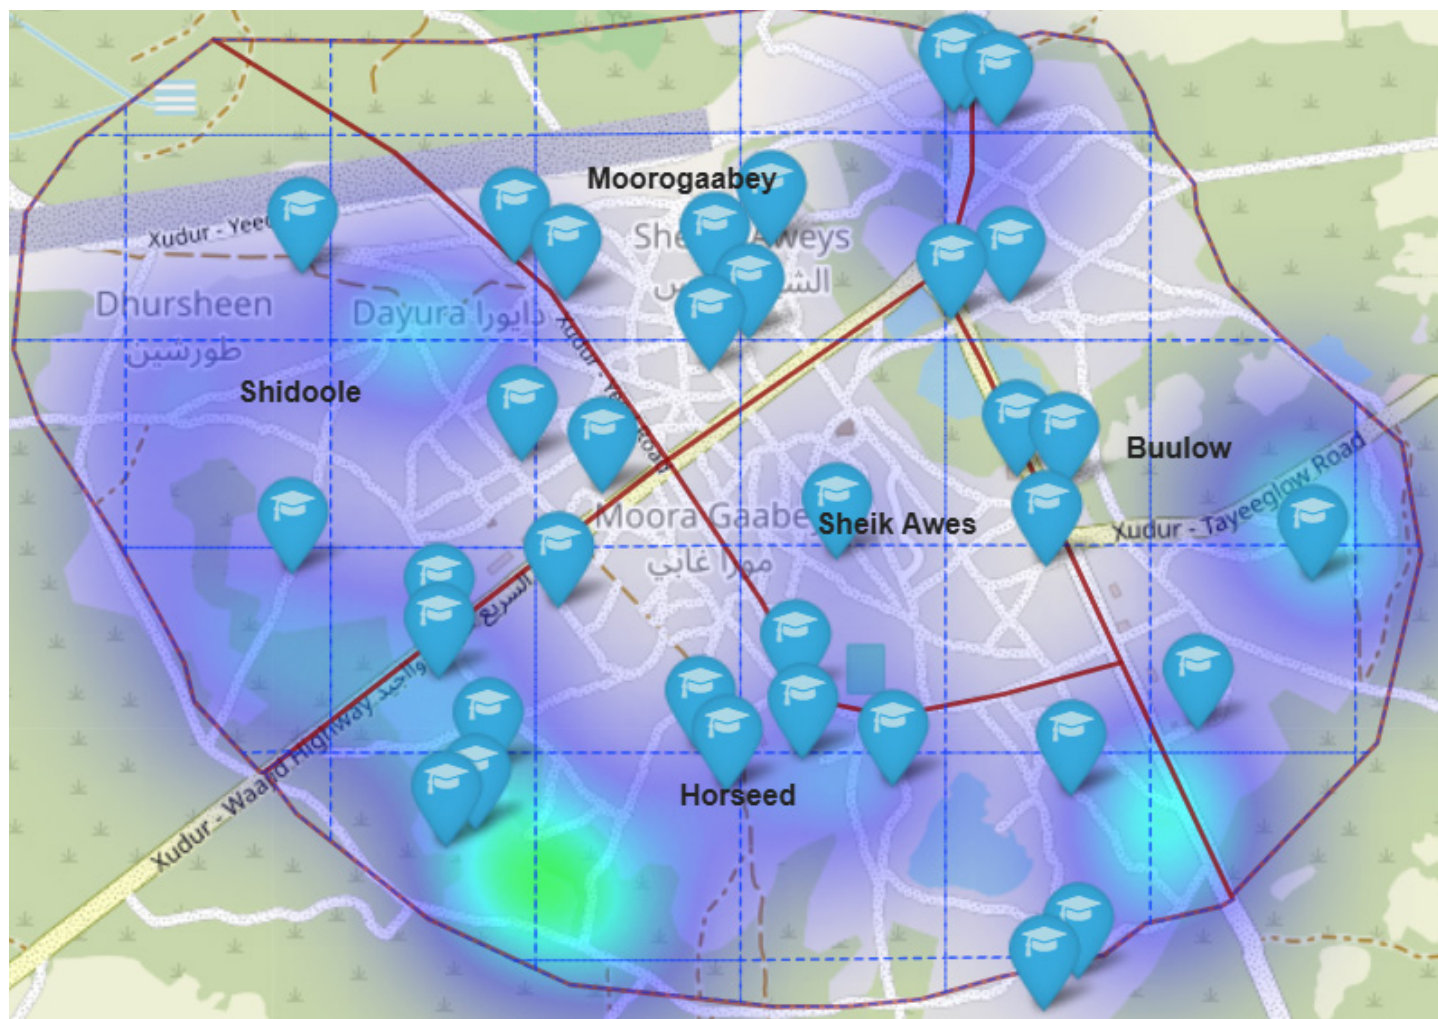

## CONFERENCE PAPER: CONVERTING DATA INTO ACTION

In 2025, IOM Somalia collaborated with Somalia's National Center for Rural Development and Durable Solutions (NCRDS), the Swiss Development Cooperation (SDC), and the Foreign Commonwealth and Development Office (FCDO) to develop a paper for the 4th Intergovernmental Authority on Development (IGAD) Scientific Conference on Migration and Displacement.

The paper highlights how the Danwadaag Durable Solutions Consortium's project level monitoring tool has been scaled to become a national government-led survey in Somalia, supporting to implement key development priorities such as the National Solutions Pathways Action Plan. IOM and the NCRDS co-presented on the paper at the conference in Addis Ababa in May 2025.

## FACILITY MAPPING AND ANALYSIS

The Facility Mapping and Analysis has been implemented since 2025, providing a spatial overview of facilities, infrastructure and services in urban centers that host IDPs. The initiative is jointly implemented with the Camp Coordination (CCCM) Cluster and the Area-Based Coordination (ABC) mechanism in priority cities. The analysis aims to support area-based interventions and the prioritization of services across the humanitarian-development-peace nexus (HDPN).
